#Damage symptoms of the emmalocera depressella?

- a. Bunchy top
- b. Dead harts pulled easily
- c. Spiral glasseries
- d. Dead hearts cannot palled easily**

#Which structure is unicellular?

- a. Spine
- b. Gland
- c. Seta
- d. Pile**

#What is the function of the micropyle in an insect's egg?

- a. Water balance
- b. Respiration
- c. Nutrition
- d. Sperm entrance**

#Which mouthparts lie between the labrum and the maxillae?

- a. Hypopharynx
- b. Labium
- c. Mandibles**
- d. Palps

A line of weakness between adjacent sclerites that breaks during molting is called a

- a. Apodeme
- b. Ecdysial suture**

Agrilearner App Team

c. Apophysis

d. Epistomal suture

#Chitin is most abundant in which part of the exoskeleton?

a. Epicuticle

b. Cuticulin layer

c. Procuticle

d. Epidermis

#In a male insect, which structure would lie above (dorsal to) the anus?

a. Epiproct

b. Aedeagus

c. Paraproct

d. Furca

#What type of chemical monomer forms the backbone of a chitin molecule?

a. Lipid

b. Sugar

c. Quinone

d. Amino Acid

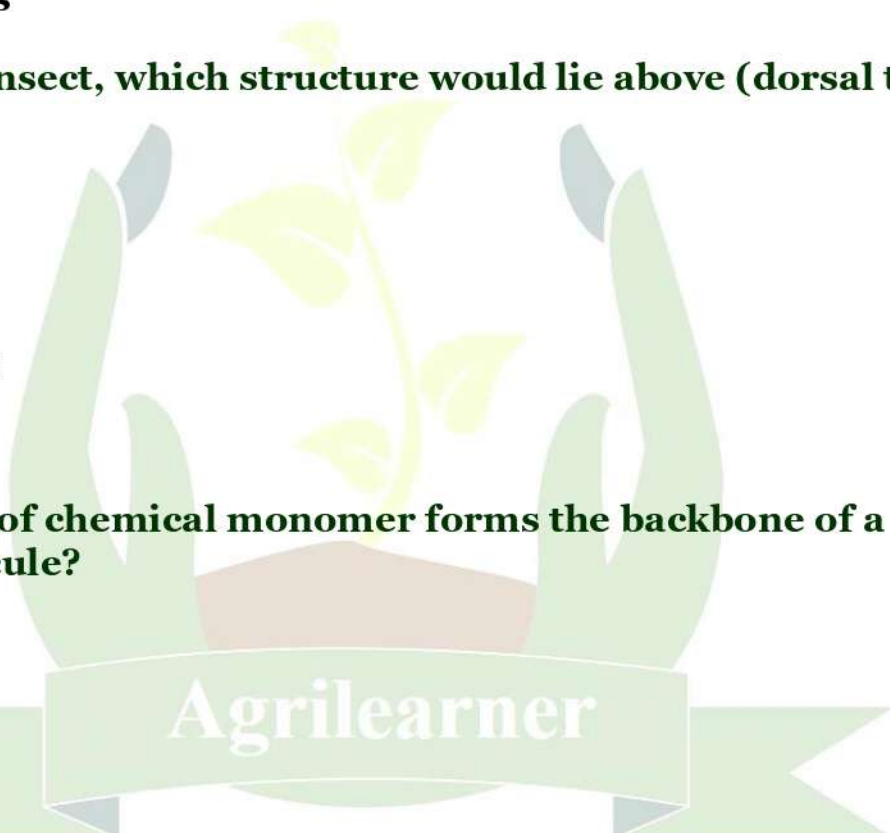

#To which body segment are the halteres attached?

a. Mesothorax

b. Prothorax

c. First abdominal

d. Metathorax

Agrilearner App Team

Which structure lies between the buccal cavity and the salivarium?

- a. Labium
- b. Cibarium
- c. Labrum
- d. Hypopharynx**

Which structure(s) would be found on an insect's pretarsus?

- a. Trochanter
- b. Furca
- c. Empodium**
- d. All of these

Indirect flight muscles cause wing movement by:

- a. Moving thoracic sclerites
- b. Pulling on axillary sclerites
- c. Exerting hydrostatic pressure
- d. All of these**

What is the maximum number of ocelli that may be found in an adult insect?

- a. Zero
- b. Five
- c. Three**
- d. Twenty
